

WTX-710 INSTRUCTION MANUAL**INSTRUCTION GUIDE****INSTALLATION INSTRUCTIONS**

Follow the steps below to install and verify the proper operation of the WTX-710 before use.

1. Connect the supplied WDCCB power cable to the transceiver's power input.
2. Verify that the status LED is illuminated solid green, indicating the unit is powered and operating correctly.
3. Connect a compatible WH Series wireless headset and confirm proper operation.
 - **NOTE:** The transceiver and headset included in the kit are factory paired and are ready for use. Pairing is only required when connecting a replacement headset.
4. Mount the transceiver in an open, protected location to ensure optimal wireless performance.
 - **NOTE:** The standard transceiver is not waterproof and must be installed in a dry environment.

PAIRING INSTRUCTIONS

Pairing is only required when connecting a new or replacement headset to the transceiver.

1. Connect the transceiver to an active intercom system and verify that the status LED is solid green.
2. Ensure the wireless headset is powered off.
3. Remove the protective rubber cap covering the pairing button.
4. Using the supplied pairing tool or a small flat-head screwdriver, press and hold the pairing button for approximately 3 seconds until the status LED turns yellow and begins alternating yellow and green, indicating pairing mode.
5. Place the WH Series headset into pairing mode. Refer to the headset user manual for detailed pairing instructions.
6. Once pairing is initiated, the headset and transceiver will automatically establish a connection. Pairing is complete when the connection is successfully established.
